

Energy Information Administration Washington, DC

Weekly Coal Production

Production for Week Ended: December 31, 1988

Preface

The Weekly Coal Production (WCP) provides weekly production estimates of U.S. coal by State, as well as supplementary data which are usually published twice a month. Supplement 1 includes monthly and annual U.S. level data on coal production, consumption, stocks, imports, and exports. Supplement 2 contains detailed monthly data covering electric utility coal consumption, stocks, and receipts (quantity and price); and coal imports and exports.

This publication is prepared by the Coal Division; Office of Coal, Nuclear, Electric and Alternate Fuels; Energy Information Administration (EIA) to fulfill its data collection and dissemination responsibilities as

specified in the Federal Energy Administration Act of 1974 (P.L. 93-275) as amended. Weekly Coal Production is intended for use by industry, press, State and local governments, and consumers. Other publications that may be of interest are the quarterly Coal Distribution Report, the Quarterly Coal Report, Coal Production 1987, and Coal Data: A Reference.

This publication was prepared by Wayne M. Watson under the direction of Mary K. Paull and Noel C. Balthasar, Chief, Data Systems Branch. Questions on energy statistics should be directed to the National Energy Information Center (NEIC) at (202/586-8800).

• Released for Printing January 9, 1988

Summary

U.S. coal production in the week ended December 31, 1988, as estimated by the Energy Information Administration, totaled 13.9 million short tons, a 30 percent decrease from production in the previous week. The reduction in production reflects the Christmas holiday which affected mines both east (4 million short tons) and west (2 million short tons) of the Mississippi River.

The preliminary estimate for 1988 U.S. coal production is 958,912 thousand short tons. Included in this estimate are revisions to previously published 1988 third quarter production figures. Next week's report will include a summary of 1988 preliminary production estimates, by month, for each coal-producing state.

Coal Highlights

DOE Announces Public Meetings on Clean Coal Technology

The Department of Energy is beginning preparations for its third round of the Clean Coal Technology competition by scheduling a series of public meetings in January and February 1989.

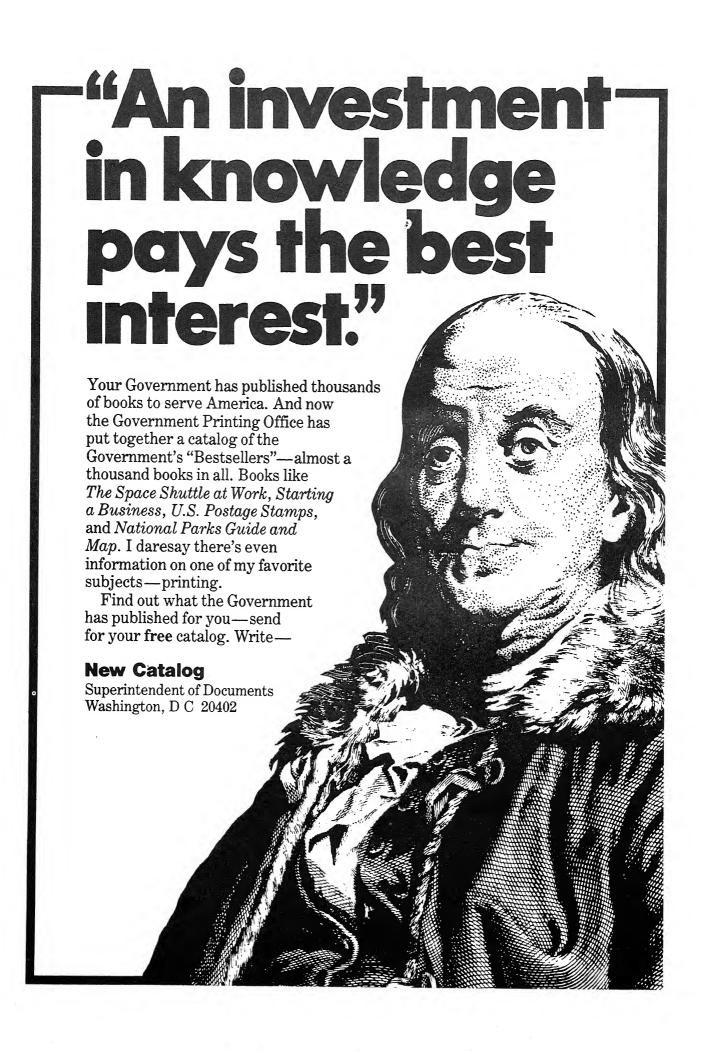

The public meetings will begin at 8:30 a.m. at the following locations:

- January 18th--Radison Hotel, Denver, CO (303) 893-3333
- February 2nd--Harvey Hotel, Irving, TX (214) 929-4500
- February 16th--Radisson Hotel, Atlanta, GA (404) 659-6500.

The day-long meetings will give the public an opportunity to make suggestions for the Department's forthcoming call for clean coal proposals. Last fall, Congress approved a funding level of \$575 million for a third round of clean coal competition and directed the Department of Energy to issue its solicitation by May 1, 1989.

The Clean Coal Technology Program is a government-industry effort to demonstrate advanced methods for using coal cleaner and more efficiently than today's technology. Begun by Congress in 1986 and expanded by President Reagan in 1987, the program is expected to finance more than \$5 billion of innovative projects when completed in the 1990s.
